

- Working on a branch
 - Check directory (codeup-web for mine, not Jupiter)
 - Git branch (shows all branches and indicates active branch)
 - Git pull origin master
 - Git checkout -b newBranchNames (creates new branch and checks it out)
 - Git add .
 - Git status
 - Git commit -m
 - Git push origin newBranchName
- Pull request for a branch
 - Find the branch in GitHub (repository)
 - Find and click "open a pull request"
 - Look for able to merge prompt, if you're unable must resolve the conflict *JUST DONT MESS UP*
 - Click merge pull request
- Back in IntelliJ - in terminal type git checkout master
- In terminal type git pull origin master
